

Dare to Care Forms Platform

ADD - App Design Document and Claude Handoff

Organized app structure, forms, workflows, data models, and build priorities.

Product: Dare to Care Forms Platform

Document type: ADD - App Design Document

Source: Uploaded React prototype and reference PDF forms

Purpose: Give Claude a clean source-of-truth package to rebuild the app more completely.

1. What this package is

This handoff package turns the earlier broad design document into a practical ADD: App Design Document. It focuses on the organized app structure, the actual reference forms, the current prototype behavior, and the vital design/content pieces Claude needs to rebuild the app cleaner.

- Use the ADD name. Do not call this a GDD; this is not a game document.
- The included source prototype is useful, but should be reorganized before serious development.
- The included PDFs are the source/reference forms; the app should digitize them into data-driven templates.
- The two strongest existing schemas are Fall Risk Assessment and Medication List.

2. Product summary

Dare to Care Forms Platform is a role-based home-care documentation app. Admins create and publish digital forms from PDFs. Caregivers fill forms for clients through a guided wizard. Office Managers review submissions and operational records.

Area	Requirement
Primary users	Admin, Office Manager, Caregiver
Primary output	Completed branded PDF forms stored as submissions
Admin job	Upload/import PDF, review extracted fields, edit template, publish
Caregiver job	Choose client, fill form, accept/reject autofill, sign, preview, submit
Office Manager job	Review/search/filter submissions and compliance records
Core design principle	Forms must be data-driven, versioned, auditable, and mobile-friendly for field staff

3. Source prototype map

Current file	Purpose
index.html	Loads React/Babel scripts, app styles, and source JSX in browser.
app.jsx	Global app state, role-based shell, sidebar, topbar, router, toasts, theme/density/accent tweaks.
data.js	Empty seed state plus mock AI-extractable form schemas for Fall Risk Assessment and Medication List.
login.jsx	Role sign-in screen for Admin, Office Manager, and Caregiver.
admin.jsx	Admin dashboard, templates list, upload PDF flow, users view, clients view, audit log.
builder.jsx	AI extraction review, form builder, field inspector, PDF preview overlays, publish/save actions.
caregiver.jsx	Caregiver today/forms/submissions/clients, guided form wizard, autofill suggestions, signature pad, PDF preview.
om.jsx	Office Manager dashboard and initial records view. Currently uses older/static APP_DATA paths in some places.
tweaks-panel.jsx	Prototype theme control panel and localStorage tweak persistence.
icons.jsx	Inline SVG icon library.
styles*.css	Global app, login, builder, and wizard styling.
uploads/	Dare to Care logo and reference PDF forms.

4. Recommended file structure

Use this structure as the clean implementation target. Claude can adjust the exact framework, but the separation of app shell, features, reusable UI, form services, schemas, and types should remain.

5. Roles and permissions

Role	Purpose	Navigation	Must be able to do
Admin	Owns template creation, PDF upload/import, publishing, users, clients, and audit review.	Dashboard, Templates, Upload PDF, Users, Clients, Audit log	Upload a reference PDF; Review extracted fields; Edit/approve a template; Publish template; Add/manage clients; View audit log
Office Manager	Reviews submissions, manages clients/team visibility, and handles supervisory/operations records.	Dashboard, Submissions, Clients, Team, Audit log	Search/filter submissions; Open generated PDFs; Track missing/late forms; Review client/team records; Complete supervisory visit forms
Caregiver	Completes published forms for assigned clients with autofill help, review, signature, and submission.	My day, Available forms, My submissions, My clients	Choose a client; Choose a form; Fill required fields; Accept/reject autofill suggestions; Sign; Preview PDF; Submit

6. Core workflows

Admin: PDF to published template

1. Admin opens Upload PDF.
2. Admin uploads or selects a reference PDF.
3. System extracts title, sections, field labels, field types, required fields, scoring rules, tables, signatures, and PDF layout hints.
4. Admin reviews AI interpretation: purpose, audience, record type, cadence, output, autofill fields.

Confidential working design document - app build handoff

Dare to Care Forms Platform - ADD / Claude Handoff

- Admin edits field labels/types/options/required flags/scoring/table columns.
- Admin saves draft or publishes template.
- Published template becomes available to caregiver and visible to office manager records flows.
- Audit event is recorded.

Caregiver: Fill and submit form

- Caregiver chooses a form from My day or Available forms.
- Caregiver selects a client.
- Wizard walks through each section.
- Safe autofill can be accepted individually or in bulk; unsafe autofill such as signature requires explicit action.
- Required fields block progress until complete.
- Computed fields update automatically, such as fall-risk score and tier.
- Caregiver reviews answers, previews the branded PDF, signs where required, and submits.
- Submission record stores template version, client, values, signer, timestamps, PDF reference, and audit event.

Office Manager: Records review

- Office Manager opens Submissions.
- Records can be searched/filtered by client, caregiver, form type, status, and date range.
- Manager opens submission detail/PDF, checks completion, requests correction if needed, exports/downloads if authorized.
- Manager can monitor required recurring forms such as care plan review, supervisory visit, activity report, and fall-risk reassessment.

7. Screen and content map

Screen	Content	Notes
Login	Role cards/sign-in	Prototype role switching; production needs real auth.
Admin Dashboard	Template/client/submission/audit summary; empty getting-started state	Use real state, not fake filler.
Templates	Published template list, search, status, version, fields, submissions	Templates are created by upload/import or JSON schema.
Upload PDF	Drag/select PDF; analyzing progress; detected fields/tables/signatures/scoring	Output is draft template requiring admin review.
Form Builder	AI interpretation, sections/fields, field inspector, PDF preview overlays, save/publish	Most important admin screen.
Clients	Client list and add/edit client modal	Client data powers autofill.
Caregiver My Day	Assigned clients/forms and recent submissions	Mobile-first.
Caregiver Wizard	Pick client, fill sections, accept/reject autofill, review, PDF preview, signature, submit	Most important field-worker flow.
Office Manager Records	Search/filter submissions and open PDFs	Must connect to real submissions state.
Audit Log	Actor, action, target, timestamp, IP/device metadata	Record every important action.

8. Form system design

The form system should be schema-driven. A form template contains sections. Sections contain fields. Fields define type, required status, semantic meaning, options/tables/scoring/autofill rules, validation, and PDF layout hints.

Field type	Use
text	Names, short answers, IDs, addresses, phone fields
date	DOB, assessment date, signature date, review date
textarea	Notes, comments, goals, instructions, narrative answers
radio	Single choice, yes/no, scored assessment questions
select	Dropdown choice, medication route/frequency, status
checkbox/checkboxlist	Service tasks, policy acknowledgement, multiple selected items
table/repeating rows	Medication schedules, weekly service grids, activity reports
computed	Total scores, risk levels, derived fields
signature	Canvas/signature capture and timestamped sign-off

Confidential working design document - app build handoff

static policy text	Long acknowledgement content from policy documents
--------------------	--

9. Reference form inventory

Priority	Owner	Form	Type	Pages	Build note
High	Caregiver	Caregiver/New Hire Paperwork.pdf	Onboarding packet	22	Digitize as multiple sub-forms or a guided onboarding packet.
High	Caregiver	Caregiver/Workplace_Violence_Policy_Acknowledgment.pdf	Policy acknowledgement	1	Simple acknowledgement/signature form; good MVP candidate.
High	Client	Client/Client Admission Packet.pdf	Client intake packet	25	Large packet; split into smaller intake modules for cleaner UX.
High	Client	Client/Client_Care_Plan.pdf	Care plan	2	Core service-plan document; should connect to client profile and services.
High	Client/Caregiver	Client/Fall_Risk_Assessment.pdf	Clinical assessment	1	Already represented in prototype schema and PDF preview.
High	Client/Caregiver	Client/Medication_List.pdf	Clinical record	1	Already represented in prototype schema and PDF preview.
Medium	Employee/Caregiver	Employee/Client_Care_Plan_Review.pdf	Acknowledgement	1	Simple training/policy acknowledgement.
Medium	Employee/Caregiver	Employee/Emergency_Preparedness_Plan_(EPP).pdf	Education acknowledgement	1	Policy/education review with staff signature.
High	Office Manager/Caregiver	Office Manager/Caregiver Activity Report.pdf	Visit/activity log	1	Timesheet/service log; can become recurring shift note.
Medium	Office Manager/Admin	Office Manager/DareTC SOP Manual.pdf	Operations SOP	7	Reference manual, not primarily a fillable form.
High	Office Manager	Office Manager/Supervisory_Visit_Form.pdf	Supervisory visit	1	Core supervisory documentation and compliance review.

10. Implemented form schemas

Fall Risk Assessment

Morse-style scale used at intake and quarterly review.

Property			Value		
Source PDF			Fall_Risk_Assessment.pdf		
Category			Clinical		
Purpose			Score a client's likelihood of falling using a Morse-style scale, prompt interventions, and produce a signed record for the chart.		
Audience			Caregiver, Office Manager		
Cadence			On intake, quarterly, and after any incident		
Output			Fall Risk Assessment PDF — Dare to Care branded, 1 page		
Section	ID	Field	Type	Req	Options/columns
Client identification	f1	Client full name	text	Yes	
Client identification	f2	Date of birth	date	Yes	
Client identification	f3	Medical record number	text	No	
Client identification	f4	Assessment date	date	Yes	
History	f5	History of falling (within 3 months)	radio	Yes	No (0); Yes (25)
History	f6	Secondary diagnosis	radio	Yes	No (0); Yes (15)

Dare to Care Forms Platform - ADD / Claude Handoff

Ambulatory aid & gait	f7	Ambulatory aid	radio	Yes	None / bed rest / wheelchair / nurse (0); Crutches / cane / walker (15); Furniture (30)
Ambulatory aid & gait	f8	IV / heparin lock	radio	Yes	No (0); Yes (20)
Ambulatory aid & gait	f9	Gait / transferring	radio	Yes	Normal / bedrest / immobile (0); Weak (10); Impaired (20)
Ambulatory aid & gait	f10	Mental status	radio	Yes	Oriented to own ability (0); Forgets limitations (15)
Plan & sign-off	f11	Total score	computed	Yes	
Plan & sign-off	f12	Risk level	computed	Yes	
Plan & sign-off	f13	Interventions / notes	textarea	No	
Plan & sign-off	f14	Assessor signature	signature	Yes	
Plan & sign-off	f15	Signature date	date	Yes	

Medication List

Current medications maintained by the caregiver. Preserves the tabular schedule from the original form.

Property		Value			
Source PDF		Medication_List.pdf			
Category		Clinical			
Purpose		Maintain the current medication regimen for a client and reconcile against bottle counts at each shift change.			
Audience		Caregiver, Office Manager			
Cadence		On admission and at each medication change			
Output		Medication List PDF — Dare to Care branded, 1 page with tabular schedule			
Section	ID	Field	Type	Req	Options/columns
Client identification	mf1	Client full name	text	Yes	
Client identification	mf2	Date of birth	date	Yes	
Client identification	mf3	Primary physician	text	Yes	
Client identification	mf4	Review date	date	Yes	
Active medications	mf5	Medication schedule	table	Yes	columns: Medication, Dose, Route, Frequency, Time(s), Prescriber, Notes
Allergies & verification	mf6	Known allergies	textarea	No	
Allergies & verification	mf7	Reconciled with bottle counts	radio	Yes	Yes — all counts match (0); Discrepancy noted (see notes) (0)
Allergies & verification	mf8	Caregiver signature	signature	Yes	
Allergies & verification	mf9	Signature date	date	Yes	

11. Additional forms to digitize

Form/module	Digitization plan
Client Admission Packet	Split into modules: agreement, client profile, service schedule, payment authorization, assessment, care plan, rights/HIPAA, advance directives, EPP, vehicle authorization, signatures.
New Hire Paperwork	Split into onboarding modules: interview, job descriptions, availability/emergency contact, rules, handbook, competency, automobile use, time-off, HIPAA, EPP, signatures.
Client Care Plan	Weekly service schedule plus profile, emergency contact, physician, problems, allergies, goals, supplies, instructions, supervisor contact, signatures.
Caregiver Activity Report	Shift/date/time totals, services checklist, personal care checklist, comments, daily client/caregiver signatures, notes.
Supervisory Visit Form	Visit info, visit type/method, service plan reviewed yes/no, performance matrix, client feedback, signatures.

12. Data model

User

id, name, email, role, status, permissions, createdAt, lastLoginAt

Client

id, name, dob, mrn, phone, address, primaryPhysician, emergencyContacts, allergies, carePlanSummary, assignedCaregivers, status, createdAt, updatedAt

FormTemplate

id, key, name, category, description, sourcePdfId, version, status, sections, interpretation, createdBy, publishedAt, updatedAt

FormField

id, sectionId, label, type, required, semantic, options, columns, formula, autofill, validation, layoutHints

Submission

id, templateId, templateVersion, clientId, caregiverId, values, computedValues, signatures, status, pdfUrl, submittedAt, reviewedAt

AuditEvent

id, timestamp, actorId, actorRole, action, targetType, targetId, ip, metadata

13. PDF output requirements

- Each completed submission must generate or stamp a Dare to Care branded PDF.
- The PDF must store the template version used at submission time.
- Template edits after submission must not change historical PDFs.
- Complex packets may be separate module PDFs or a final combined packet.
- PDF generation should be a service, not mixed directly into the wizard screen.

14. Security, privacy, and compliance basics

- Treat client, caregiver, assessment, payment, and health-related records as sensitive.
- Use role-based access checks for every screen and export action.
- Store audit events for important user actions.
- Use encryption, secure session handling, and least-privilege access in a production build.
- The prototype says HIPAA-aware, but that is not a finished HIPAA compliance implementation.

15. Claude build checklist

- Convert prototype into clean component/file structure.
- Keep ADD naming; do not call the document a GDD.
- Use real form schema JSON instead of hardcoded UI-only fields.
- Make Admin upload/import and builder clean enough for nontechnical staff.
- Make caregiver wizard mobile-first and simple.
- Connect submissions to Office Manager records; avoid static demo arrays.

Dare to Care Forms Platform - ADD / Claude Handoff

- Generate/stamp a branded PDF for each completed submission.
- Keep audit trail and role permissions from the start.
- Create JSON schemas for priority forms beyond Fall Risk and Medication List.
- Make Office Manager records read from the same submissions store used by caregiver submissions.
- Replace prototype role switching with authentication when moving beyond demo.
- Keep all source/reference PDFs organized in a predictable import/reference folder.

16. Files included in this handoff package

File/folder	Purpose
00_CLAUDE_README_AND_PROMPT.md	Pasteable prompt/instructions for Claude.
01_app_structure.md	Current file map plus clean target file structure.
02_forms_inventory_and_field_plan.md	Form inventory and digitization plan.
03_app_design_content_map.md	App content, navigation, and screen requirements.
04_data_model_and_workflows.md	Entities, workflows, gaps, and behavior requirements.
app_spec.json	Structured source-of-truth JSON for Claude.
implemented_form_schemas.json	Full current schemas from prototype data.js.
prototype_source/	Unzipped current React prototype.
reference_forms/	Original PDFs organized by role/category.
reference_form_text/	Extracted text from PDFs for easier form modeling.
source_prototype_original_upload.zip	Original uploaded zip, preserved.
